```
//initialization

git init

//adding files

git add .

//for local commit

git commit -m 'message
'

//link repo

git remote add origin url

//for push code

git push origin master

//For Clone And Download

git clone url

//for change the URI (URL) for a remote Git repository?

git remote set-url origin new.git.url/here

//only for first Time you set email and name so you should write this command after "git init"

// Set the email address for all repositories

git config --global user.email "smarsalanshah125@gmail.com"

//Set the user name for all repositories

git config --global user.name "SyedMuhammadArsalanShah"

//for copy & paste in git

Ctrl + Insert (Copy)

Shift + Insert (Paste)
```
